

Agnetic NetOps

Positioning NetOps Teams for the Future
of AI-Driven Infrastructure

Solution Highlights

- AI is reshaping network operations, and the organizations that embrace it responsibly will gain a decisive competitive edge.
- Kilter AI advances NetOps teams from performing basic automations to delivering AI-enabled, human-in-the-loop operations.
- Kilter AI delivers trustworthy AI insights, recommendations, and automation creation, without the risk of self-healing AI outages.
- Kilter supports 180+ vendors with 3,000+ pre-built automations, providing the foundation for agentic AI.

by 2027

50%

of organizations will
use agentic NetOps
by 2030

60%

of IT leaders plan
AI-enabled network
automation in 2 years

(Gartner)

The Challenge

NetOps teams face an unprecedented convergence of pressures. The number of CVEs published annually has exceeded 48,000 — a 20% increase year-over-year — while hackers now exploit vulnerabilities in days rather than months. Meanwhile, the emergence of advanced AI tools like Mythos, capable of autonomously discovering and chaining vulnerabilities into working exploits, has fundamentally altered the threat landscape.

At the same time, today's networks are more complex than ever, with multi-vendor environments, cloud-managed devices, distributed infrastructure, and ongoing configuration drift. These challenges demand attention from teams already stretched thin by “keep the lights on” tasks. Manual processes simply can't keep up.

- **Speed Is the New Risk:** Threat actors exploit vulnerabilities at machine speed. Manual workflows, including reviewing CVEs, identifying affected devices, and building remediation plans, can take weeks, leaving organizations exposed.
- **Complexity at Scale:** Multi-vendor networks require separate automation frameworks for each device type. There is no universal standard, and even minor configuration errors can cascade into widespread outages.
- **Skills & Resource Gaps:** Over 80% of comprehensive network automation initiatives will be shelved by 2028 due to persistent skills scarcity. Teams need tools that reduce the expertise barrier, not increase it.

What is Agentic NetOps?

Agentic NetOps uses goal-driven, autonomous AI agents equipped with capabilities like memory, planning, and real-time sensing to manage network tasks independently. Unlike traditional automation scripts that follow rigid rules, agentic AI can reason, adapt, and act. It doesn't just inform; it executes the next step.

Gartner predicts that over the next three to five years, AI agents will increasingly take over specific network operational tasks while humans assume supervisory, management, and policy-setting roles. Automation is the foundation: without it, agentic AI has nothing to act on.

The Road to Agnetic NetOps

The Solution

BackBox has been developing the data foundation and automation engine that agnetic NetOps needs for over a decade. The Kilter platform combines AI-enriched vulnerability data, multi-vendor automation, and a human-in-the-loop design philosophy to responsibly drive network teams toward autonomous operations.

ENRICHED DATA AGGREGATION

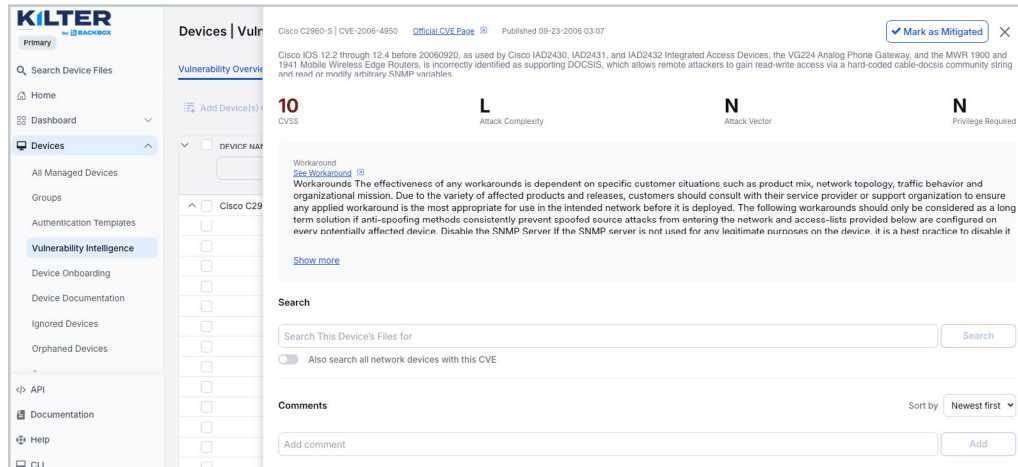

A normalized, AI-curated data feed that combines CVE data from CISA, NCD, NIST, and vendor advisories, providing teams with a single source of truth instead of relying on fragmented, manual lookups.

DEVICE NAME	PUBLISH DATE	VENDOR	RISK SCORE	CVE CVSS	TITLE	KNOWN WORKAROUND	CURRENT VERSION
Cisco C2960-S (83)	09-23-2006 03:07	Cisco Systems Inc	EOL	CVE-2006-4950	10	Yes	12.2(55)SE3
	09-22-2020 18:15			CVE-2019-16009	8.8	Cross-Site Request Forge	Yes
	07-17-2017 14:29			CVE-2017-6744	8.8	Improper Restriction of O	No
	07-17-2017 14:29			CVE-2017-6743	8.8	Improper Restriction of O	No
	07-17-2017 00:00			CVE-2017-6742	8.8	Improper Restriction of O	No
	07-17-2017 14:29			CVE-2017-6740	8.8	Improper Restriction of O	No
	07-17-2017 14:29			CVE-2017-6739	8.8	Improper Restriction of O	No
	07-17-2017 14:29			CVE-2017-6738	8.8	Improper Restriction of O	No
	07-17-2017 14:29			CVE-2017-6737	8.8	Improper Restriction of O	No
	07-17-2017 14:29			CVE-2017-6736	8.8	Improper Restriction of O	No
	05-05-2025 00:00			CVE-2025-20154	8.6	Improper Input Validation	No

CVE WORKAROUND INSIGHTS

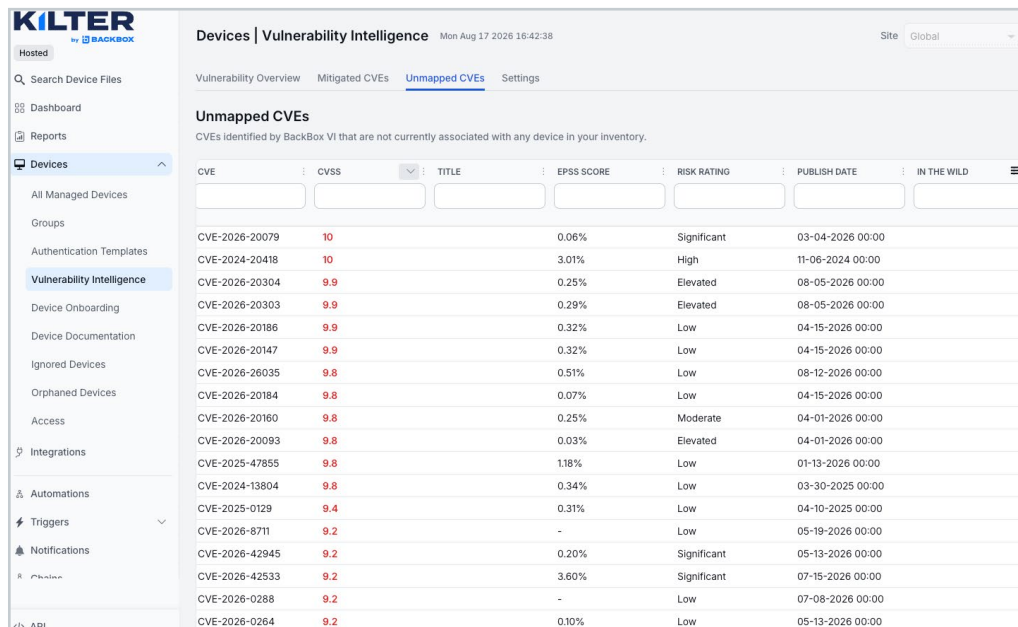

Kilter uses AI to analyze vendor-published workarounds and translate them into clear, context-aware remediation guidance. By identifying which CVEs have validated workarounds, Kilter helps teams reduce risk faster and avoid unnecessary full-device upgrades when a targeted mitigation is available.

The screenshot shows the Kilter Vulnerability Intelligence interface. On the left is a sidebar with navigation options: Primary, Search Device Files, Home, Dashboard, Devices (selected), Authentication Templates, Vulnerability Intelligence (selected), Device Onboarding, Device Documentation, Ignored Devices, Orphaned Devices, API, Documentation, Help, and CLI. The main content area displays details for CVE-2006-4950 (Cisco C2960-S). It includes a 'Vulnerability Overview' section with a CVSS score of 10, an 'Attack Complexity' of Low (L), an 'Attack Vector' of Network (N), and a 'Privilege Required' of None (N). A 'Workaround' section provides detailed remediation steps, including disabling the SNMP Server. Below this is a 'Search' section with a text input and a 'Search' button, and a 'Comments' section with a text input and an 'Add' button.

MAPPED & UNMAPPED CVE VISIBILITY

See mapped CVEs (affecting your devices now) alongside unmapped CVEs (potential future exposure), enabling proactive risk management instead of reactive firefighting.

The screenshot shows the Kilter Vulnerability Intelligence interface with the 'Unmapped CVEs' tab selected. The main content area displays a table of unmapped CVEs. The table has columns for CVE, CVSS, TITLE, EPSS SCORE, RISK RATING, PUBLISH DATE, and IN THE WILD. The table lists 18 CVEs, including CVE-2026-20079, CVE-2024-20418, CVE-2026-20304, CVE-2026-20303, CVE-2026-20186, CVE-2026-20147, CVE-2026-26035, CVE-2026-20184, CVE-2026-20160, CVE-2026-20093, CVE-2025-47855, CVE-2024-13804, CVE-2025-0129, CVE-2026-8711, CVE-2026-42945, CVE-2026-42533, CVE-2026-0288, and CVE-2026-0264. The table is sorted by 'Newest first'.

CVE	CVSS	TITLE	EPSS SCORE	RISK RATING	PUBLISH DATE	IN THE WILD
CVE-2026-20079	10		0.06%	Significant	03-04-2026 00:00	
CVE-2024-20418	10		3.01%	High	11-06-2024 00:00

CVE-2024-13804	9.8		0.34%	Low	03-30-2025 00:00	
CVE-2025-0129	9.4		0.31%	Low	04-10-2025 00:00	
CVE-2026-8711	9.2		-	Low	05-19-2026 00:00	
CVE-2026-42945	9.2		0.20%	Significant	05-13-2026 00:00	
CVE-2026-42533	9.2		3.60%	Significant	07-15-2026 00:00	
CVE-2026-0288	9.2		-	Low	07-08-2026 00:00	
CVE-2026-0264	9.2		0.10%	Low	05-13-2026 00:00	

MULTI-VENDOR COMPLIANCE CHECKS

Automatically evaluate device configurations across all managed vendors against policies and identify when a fix for one device type should be applied to similar devices from other manufacturers.

CVE WORKAROUND TO CHAINS

Use an AI-powered “Build Chain” action to instantly convert CVE workaround guidance into a structured, editable remediation workflow. This accelerates remediation and reduces manual effort while ensuring full control through review and approval before execution.

AUTOMATION CREATION ASSISTANT

Enter, paste, or upload CLI commands and use Kilter AI to instantly generate production-ready automation tasks and workflows. This reduces the time and complexity of building automations while ensuring accuracy, reusability, and full control through preview and approval before execution.

Key Use Cases

CYBERSECURITY RISK MANAGEMENT

Security teams receive messy, inconsistent vulnerability reports. Kilter normalizes this data, automatically verifies which CVEs affect your specific devices, surfaces workarounds, and generates remediation chains, reducing effort from weeks to hours.

AUTOMATION CREATION AT SCALE

Multi-vendor networks lack a universal standard. Kilter's Automation Creation Assistant turns CLI commands into structured, vendor-aware automation tasks and chains, allowing engineers without extensive scripting skills to create production-ready workflows.

MULTI-VENDOR RISK MANAGEMENT

When a vulnerable configuration is identified on a device, Kilter quickly surfaces similar configurations across your environment to help guide further investigation. This helps teams prioritize what to review next and take informed action, while keeping validation and decision-making firmly in human hands.

About BackBox

Over 500 enterprises worldwide trust Kilter by BackBox as their preferred network cyber resilience platform. Kilter supports network devices from over 180 vendors, offering thousands of pre-built automations and a no-code way to create new ones. Kilter empowers teams with the confidence to automate critical network processes, maintain business continuity during disruptions, and recover swiftly. From backups and OS updates to configuration compliance and vulnerability management, Kilter ensures that automations deliver consistent, reliable outcomes.
